

HTML5, SASS (Sass syntax), and JS (Zepto based) Implementation

Templateable html sources

We would like you to take this design and turn it into a few different source files. The design is comprised of elements that we generate dynamically from our own template engine. We need examples of each element in pure html/sass that we can then turn into templates. We do not need you to build them as templates, rather we expect separate html implementations of each of the following:

- Full Content Card w/ photo

Cavaliers' LeBron James Gave Final Approval for JR Smith Trade

You knew the Cleveland Cavaliers would not make a trade for the streaky shooting JR Smith without having the full consent of LeBron James. The return of Shumpert will provide LeBron with another strong body wing who now becomes interchangeable...

- Snippet

LeBron was mentioned in an article

 Bleacher Report • 1 day ago

Cavaliers' LeBron James Gave Final Approval for JR Smith Trade

...make a trade for the streaky shooting JR Smith without having the full consent of **LeBron James**. The return of Shumpert will provide...

- In-stream CTA

Stay up to date on the latest with LeBron James

- Athlete facepile side-unit

Teammates

 Kyrie Irving	 Matthew Dellavedova	 Joe Harris
 Kyrie Irving	 Matthew Dellavedova	 Joe Harris
 Kyrie Irving	 Joe Harris	 Matthew Dellavedova

- Featured athlete side-unit

Filter bar pegs to the top and expands to fill width when page is scrolled down.

<http://screencast.com/t/SyAV58St>

See the video in the link above.

The side units also stop scrolling when they reach the end.

We should, however, be able to put in as many side units top to bottom as we want of any arbitrary length.

<http://screencast.com/t/8n4CecWAPij>

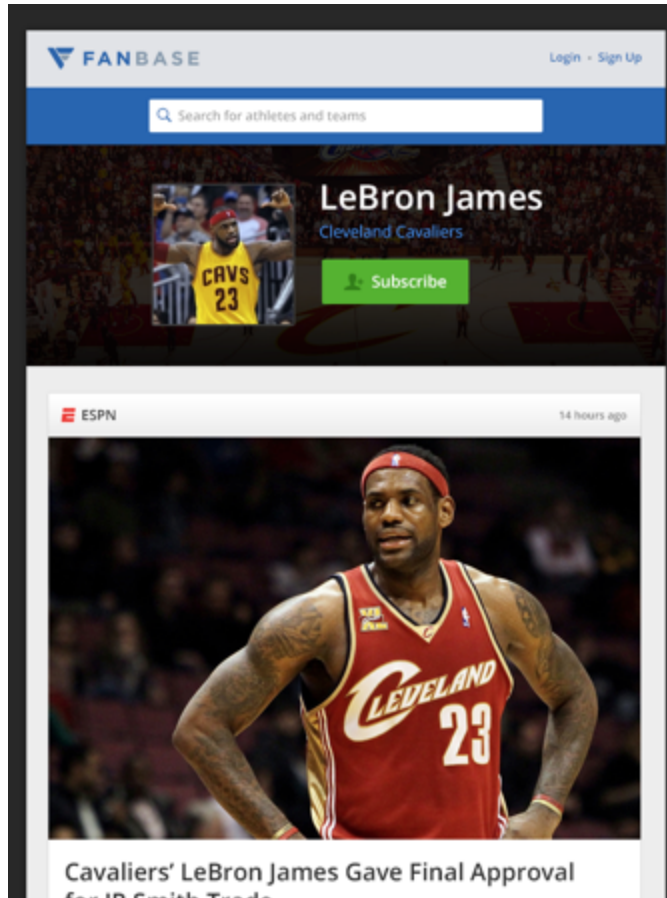

See link above.

We will implement the content area as an infinite scroll, but for your deliverable, just render enough items that it exercises the dynamic elements of the page like filter and side-unit scroll stops.

Responsive

The desktop layout with side units and top-pegged filters should still be visible on tablets.

For phone dimensions, the version below should be visible. Note that the filters are permanently pegged to the bottom 100% of the time now. The in-stream CTA, content card with photo, and snippet elements above should be visible. The rest will be hidden.

Use these for main fonts:

<link type="text/css" rel="stylesheet"
